

Aluminum Cable Tie - SI-0939 Series

SI-0939-7 - On Strand

SI-0939-10 - Bundling Drop Cable

SI-0939-12 - On Service Mast Pipe

Aluminum Cable Ties, compared to Plastic Cable Ties, will not compress or kink the cable, and will prevent fracture of the sheathing due to repeated flexing of the cable under extreme hazards. Over time, Plastic Cable Ties will cause micro-reflections and impedance mismatch resulting in a significant decrease in signal clarity.
